

Content Versioning – Product Sheet

2017-02-13

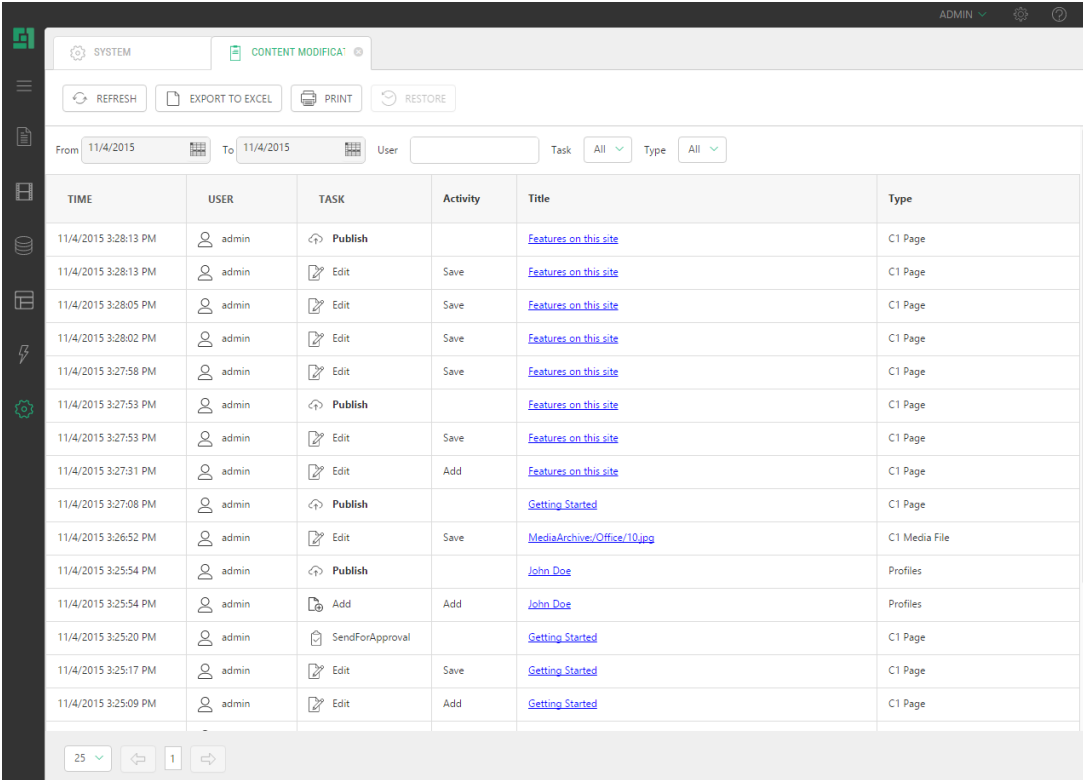

Keep Track of Your Creativity

Making copies, or snapshots, of web pages every now and then is a good practice for those who often edit them. It is even more critical if you are not the only person who does the editing and the number of pages is great.

Having an older version of a web page handy may save a lot of your time if something goes wrong with its current version.

The Content Versioning add-on keeps track of versions of web pages on C1 CMS based website. And not only web pages. Media files and data items are also taken a good care of.

The add-on integrates with the CMS Console and is available within a couple of clicks in the Content, Media and Data perspectives or centrally, in the System perspective.

The screenshot displays the 'CONTENT MODIFICATION' section of the CMS console. It features a navigation bar with 'SYSTEM' and 'CONTENT MODIFICATION' tabs, and buttons for 'REFRESH', 'EXPORT TO EXCEL', 'PRINT', and 'RESTORE'. Below the navigation bar, there are filters for 'From' and 'To' dates (both set to 11/4/2015), a 'User' field, and dropdown menus for 'Task' and 'Type'. The main area contains a table with columns for 'TIME', 'USER', 'TASK', 'Activity', 'Title', and 'Type'. The table lists various actions such as 'Publish', 'Edit', and 'Add' performed by 'admin' on different content items like 'Features on this site', 'Getting Started', and 'John Doe'. At the bottom, there are pagination controls showing '25' items per page and '1' page of results.

Not only can you view the version history of any particular web page, media file or a data item, but also view the contents of its specific version, restore a specific version and compare versions.

Features

The Content Versioning add-on allows you to:

- Automate content versioning
- View all the changes in one place
- View only the changes you need
- View the version history of a page, a media file or a data item
- View previous versions
- Restore previous versions
- Restore deleted pages, media files and data items
- Compare versions
- Print or export the log or reports

Automatic Versioning

Versions are created automatically.

Every time you click **Save**, **Send for Approval**, **Send for Publication** or **Publish**, a version is created.

Focus on working with the content instead of saving copies.

Do you want to identify all those latest change no matter what content item was changed?

View the changes made to pages, data items or media files in one place.

Then click the item's title and get to the item for more.

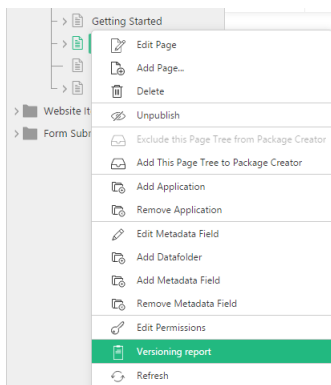

Viewing Changes Selectively

Do you need to view the changes made by a specific user or on a specific day only?

Filter the change log entries by time, user or activity and make your work with the log much easier.

Has something gone wrong with a web page, a media file or data item?

Don't worry. Select its previous good version from the list and restore it.

And resume your work from there.

Restoring Deleted Items

Have you deleted a page or some data but now you'd rather have it back?

You can undelete it in no time.

Find the "delete" record in the log and restore it.

In this way, you can undelete pages, media files, global data and page folder data items.

Are you wondering what exactly has changed in a page, media file or data item since yesterday?

Compare it with the latest version.

If you like, you might as well compare two non-current versions.

And with web pages, you can even see the actual changes in the content.

Printing and Exporting

Do you want a printout of content changes or more convenient way of working with report data?

Print the modification log or a specific versioning report. Or export the log entries to an Excel spreadsheet.

You can also fine-tune the printed or exported reports by filtering their entries.
