# Subsite Manager – Product Sheet

2017-02-13

C1 CMS

Host multiple websites for others

Are you running C1 CMS and considering website hosting services for other people? How about creating subsites in one C1 CMS installation, one for each 3rd-party owner?

The Subsite Manager add-on allows you as a global C1 CMS administrator to create multiple subsites and associated users, thus enabling a 3rd-party subsite owner to maintain their own subsite, without having permissions to other subsites or global features.

It enables the global to set up multiple website stencils ("master templates") to copy new subsites from, media folders included.

3rd-party subsite owners can manage subsite users within their subsites, thus being able to delegate content management tasks to other people with limited access where needed.
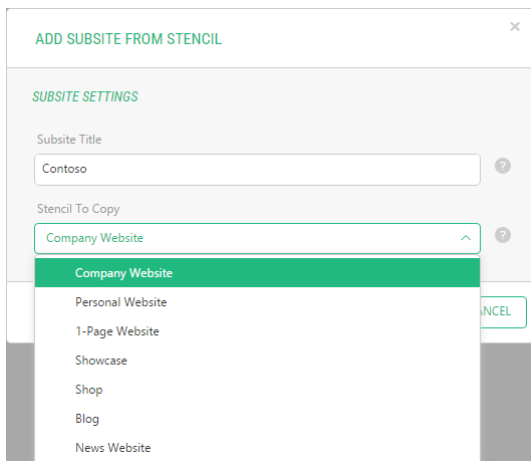

3rd-party subsite users are absolutely free in editing page content and page and will enjoy the familiar C1 CMS GUI experience in that.

Features

The following are major features of the Subsite Manager add-on:

- Multiple website stencils
- Media folders included
- Multiple subsites
- User management by 3rd-party owners
- Content editing by 3rd-party owners
- Familiar C1 CMS GUI experience

## Multiple website stencils

Does one subsite owner want a blog and another one an online shop?

As a global administrator, you can set up and use different types of stencils for website of various purposes to meet your customers' requirements.
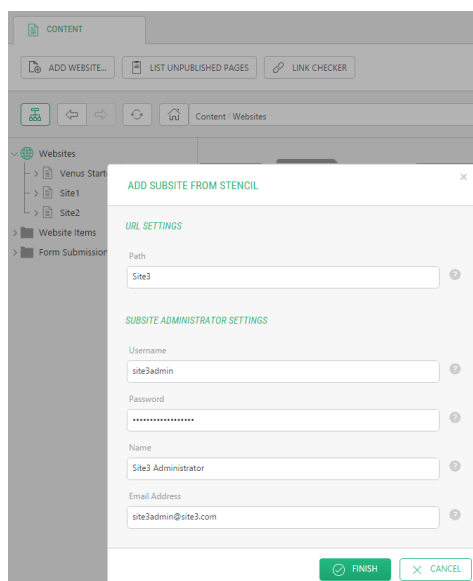

Media folders included

Does subsite users need to use specific images or media files?

When setting up a website stencil, you can choose what media folders will be copied and made available for the subsite's users.

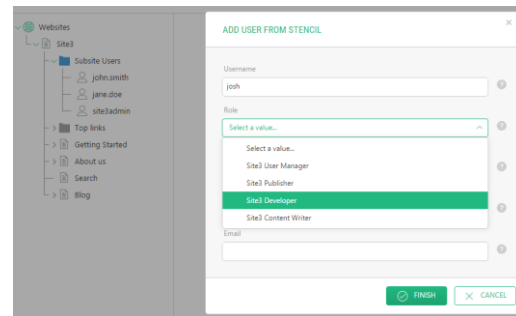

Multiple subsites

Looking to host 10 websites for 3rd-party owners? Or 100 websites? Or even more?

You can create as many subsites as you need in just one C1 CMS installation.

C1 CMS

User management by 3rd-party owners

Will 3rd-party subsite owners plan on delegating content editing task to several users?

Subsite user managers are allowed to add and delete subsite users within their subsites, as well as assign these users one of roles pre-defined by you as an administrator: "administrators", "developers", or "content writers".

Content editing by 3rd-party owners

Do subsite owners want to have their subsite edited and updated by other people?

When provided access by subsite owners, subsite users will have full freedom in changing any page content, selecting different layouts for pages, adding CMS Functions to pages, and adding and deleting pages on their website.

Familiar user experience

Have 3rd-party users worked in C1 CMS before?

As the Subsite Manager add-on builds on top of the existing C1 CMS UI, 3rd-party C1 CMS users need no specific training to start off.

They will work in the same good old C1 CMS GUI environment.

Price Information

You can get the Subsite Manager add-on as a part of one of the C1 CMS service plans.

For information about the plans, please see http://c1.orckestra.com/Plans.
